**Early vs Stopping**

# Cross-Validation

- **nfolds**: number of folds for N-fold cross-validation (default: 0, disabled)
- **keep\_cross\_validation\_predictions**: keep the predictions of the cross-validation models.
- **keep\_cross\_validation\_fold\_assignment**: keep the cross-validation fold assignment.
- **fold\_assignment**: cross-validation fold assignment scheme, if fold column is not specified. The "Stratified" option will stratify the folds based on the response variable, for classification problems. Must be one of: "AUTO", "Random", "Modulo", "Stratified".
- **fold\_column**: column with cross-validation fold index assignment per observation.
