

Decision Trees

Adapt, Adapt, Adapt With Decision Trees

Example: Processing mortgage applications

YRSJOB: Years at current job

YRSADD: Years at current address

DEPEND: # of dependents

MARST: marital status

LTV: loan-to-value ratio

- supervised learning
- classification or regression
- traditionally created manually
- tree-growing algorithms to optimize decision

Root

nodes

Leof

splitting

Decision Trees

- Decision tree is a recursive partition of the input space
- Most are *binary*

Decision Trees

- supervised learning $T : \mathbf{x} \rightarrow y$
- classification or regression
- traditionally created manually
- tree-growing algorithms to optimize decision

Example: Processing mortgage applications

YRSJOB: Years at current job

YRSADD: Years at current address

DEPEND: # of dependents

MARST: marital status

LTV: loan-to-value ratio
